PROFESSIONAL SUMMARY

Data Engineer with 4+ years of experience in ETL development, Microsoft Fabric, Azure Data Services, SQL, Python, and PySpark. Hands-on experience in developing metadata-driven ETL solutions, data ingestion, data transformation, data quality, and enterprise data migration using Microsoft Fabric. Experienced in translating Technical Design Documents (TDDs) into scalable data pipelines, developing custom PySpark notebooks for complex transformations, and supporting Agile software delivery.

TECHNICAL SKILLS

Programming: Python, SQL, T-SQL, PySpark, Pandas

Data Engineering: Microsoft Fabric (Lakehouse, Warehouse, Notebooks), Microsoft Azure (ADLS Gen2, Azure OpenAI, App Services, Key Vault, Synapse Datawarehouse, Event Hub), Delta Lake, ETL, ELT, Data Quality

Data Modeling: Medallion Architecture, Star Schema, Snowflake Schema, Metadata-Driven Framework

Tools & Concepts: Git, GitHub, Azure DevOps, GitHub Copilot, Streamlit, REST APIs

Databases: Microsoft SQL Server, Oracle, SQLite

PROFESSIONAL EXPERIENCE

Data Engineer | LTM (formerly LTIMindtree)

Apr 2022 – Jun 2026

- Analyzed Technical Design Documents (TDDs) to understand business requirements, source systems, and data transformation logic.
- Configured metadata in the existing Metadata Driven Ingestion Framework (MDIF) to automate data ingestion and transformation across Landing, Bronze, Silver, and Gold layers.
- Configured OneLake Shortcuts to access Excel files from customer SharePoint and load them into the Landing Lakehouse.
- Developed PySpark and SQL notebooks for complex business transformations that could not be handled through standard metadata configurations.
- Implemented data cleansing, datatype conversion, schema validation, null handling, filtering, deduplication, and business rule transformations using SQL and PySpark.
- Developed Python automation using Microsoft Fabric REST APIs to automate object creation and data loading from SQL Server into Microsoft Fabric, reducing repetitive manual migration tasks; built reusable Python utilities to improve development efficiency.
- Developed SQL-based auditing and reconciliation scripts, and performed source-to-target validation, record count reconciliation, and data quality checks to ensure migration accuracy.
- Investigated and resolved metadata configuration issues, schema mismatches, transformation errors, and pipeline failures reported during QA testing; improved logging and error handling to simplify troubleshooting.
- Worked with Azure Key Vault to securely retrieve secrets and avoid storing credentials in application code.
- Contributed to Proof of Concept (POC) activities for migrating SQL Server and Oracle workloads to Microsoft Fabric Lakehouse using Fabric Data Factory and Pipelines.
- Used Git, Azure DevOps, GitHub Copilot, and feature-branch workflows for source control, collaboration, and deployment.
- Collaborated with Business Analysts, developers, SMEs, and QA teams during requirement analysis, development, testing, defect resolution, and production deployment, supporting migration of enterprise data from SQL Server and Oracle to Microsoft Fabric.
- Explored Microsoft Fabric AI capabilities and Generative AI use cases for migration automation and developer productivity improvements.

EDUCATION

Bachelor of Computer Applications (BCA)

2017 – 2020

Bhandarkars Arts and Science College, Kundapur - Mangalore University

CERTIFICATIONS

- Microsoft Fabric Analytics Engineer Associate (DP-600) — May 2024
- Microsoft Azure Data Engineer Associate (DP-203) — Feb 2023
- Microsoft Azure Data Fundamentals (DP-900) — Jan 2023
